

Road Glide Fairing Bracket Kit Installation Instructions

Fits: 2014 & Up RG3 Road Glide Models

Parts Included:

- Fairing Brackets
 - (2) ¼"-20 Button Head Bolts
 - (2) Washers
 - (2) Aluminum Spacers (optional use)
-

Installation Steps:

1. Mounting to Gas Tank:

- Locate the tab on the fairing bracket with a **single hole**.
- This tab mounts to the **gas tank bolt location** using the **factory bolt** (not supplied).
- Ensure the **tab faces downward**, so the bolt head is concealed when viewed from the rider's position.

2. Mounting to Fairing:

- The opposite end of the bracket attaches to the **lower section of the fairing**.
- Use the **supplied ¼"-20 button head bolts and washers** to fasten the bracket into the **brass inserts** on the fairing.

3. Using the Aluminum Spacers (if needed):

- Some installations may require improved alignment between the bracket and fairing.
 - If needed, insert the **aluminum spacers** between the **fairing bracket tab** and the **gas tank mounting point** before tightening the bolt.
-

Final Check:

- Confirm all bolts are tightened securely.
- Double-check alignment of the fairing and bracket for a proper fit.
- Make sure the bracket sits flush and does not interfere with tank or fairing movement.
